Computer control system for ore yard operation at Mizushima works. *Kawasaki Steel Giho*, 22(1):6–11, 1990. In Japanese. At Mizushima Works, ore yard control systems of electric equipment were renewed. This was the second step of iron making department information system. New belt conveyor control for energy saving and staking control for quality improvement have been applied. Control technologies such as knowledge engineering, fuzzy control, and self-tuning control have been applied. The systems have been achieving great effects difficult to obtain by conventional ways, and are working with no problem at all since April 1987.
