

Problem Solving and Search in Artificial Intelligence

Tabu Search

Nysret Musliu

Database and Artificial Intelligence Group,
Institut für Informationssysteme, TU-Wien

Introduction

- Local search techniques
 - Tabu search
 - Simulated annealing
 - Stochastic Hill-Climber
 - ...
- Tabu Search uses memory during the search
- In memory are stored relevant information about the history of search
- The memory should help to avoid the cycles during the search
- Tabu search is a deterministic heuristic technique

Basic Tabu Search

```
Procedure Tabu-Suche  
begin  
  Initialize tabu list
```

Basic Tabu Search

Procedure Tabu-Suche

begin

 Initialize tabu list

 Generate randomly Initial Solution s_c

Basic Tabu Search

Procedure Tabu-Suche

begin

 Initialize tabu list

 Generate randomly Initial Solution s_c

 Evaluate s_c

Basic Tabu Search

Procedure Tabu-Suche

begin

 Initialize tabu list

 Generate randomly Initial Solution s_c

 Evaluate s_c

repeat

 Generate all neighborhood solutions of the solution s_c

Basic Tabu Search

Procedure Tabu-Suche

begin

 Initialize tabu list

 Generate randomly Initial Solution s_c

 Evaluate s_c

repeat

 Generate all neighborhood solutions of the solution s_c

 Find best solution s_x in the neighborhood

Basic Tabu Search

Procedure Tabu-Search

begin

 Initialize tabu list

 Generate randomly Initial Solution s_c

 Evaluate s_c

 repeat

 Generate all neighborhood solutions of the solution s_c

 Find best solution s_x in the neighborhood

 if s_x is not tabu solution then $s_c = s_x$

Basic Tabu Search

Procedure Tabu-Suche

begin

 Initialize tabu list

 Generate randomly Initial Solution s_c

 Evaluate s_c

 repeat

 Generate all neighborhood solutions of the
 solution s_c

 Find best solution s_x in the neighborhood

 if s_x is not tabu solution then $s_c = s_x$

 else if 'aspiration criteria' is fulfilled then

$s_c = s_x$

Basic Tabu Search

Procedure Tabu-Suche

begin

 Initialize tabu list

 Generate randomly Initial Solution s_c

 Evaluate s_c

 repeat

 Generate all neighborhood solutions of the solution s_c

 Find best solution s_x in the neighborhood

 if s_x is not tabu solution then $s_c = s_x$

 else if 'aspiration criteria' is fulfilled then

$s_c = s_x$

 else

 find best not tabu solution in the neighborhood s_{nt}

$s_c = s_{nt}$

Basic Tabu Search

```
Procedure Tabu-Suche
begin
  Initialize tabu list
  Generate randomly Initial Solution  $s_c$ 
  Evaluate  $s_c$ 
  repeat
    Generate all neighborhood solutions of the solution  $s_c$ 
    Find best solution  $s_x$  in the neighborhood
    if  $s_x$  is not tabu solution then  $s_c = s_x$ 
    else if 'aspiration criteria' is fulfilled then
       $s_c = s_x$ 
    else
      find best not tabu solution in the neighborhood  $s_{nt}$ 
       $s_c = s_{nt}$ 
    Update tabu list
  until (terminate-condition)
end
```

Example

- SAT problem:
 - Make a compound statement of Boolean variables to evaluate to true
 - Suppose we have to solve the SAT problem with 8 variables:

$$F(x) = (x_1 \vee \bar{x}_3 \vee x_7) \wedge (\bar{x}_1 \vee \bar{x}_2) \wedge \dots \wedge (\bar{x}_2 \vee x_4 \vee x_7)$$

- Find the truth assignment for each variable x_i such that $F(x) = TRUE$

General questions

- Representation of solution
 - Candidate solution is represented with a binary string of length n (number of variables)
 - Example: $X=(0,0,0,1,1,1,0,1)$ represents this solution: $x_1=0$, $x_2=0$, $x_3=0$, $x_4=1$, $x_5=1$, $x_6=1$, $x_7=0$, $x_8=1$
- Evaluation of function:
 - Weighted sum of a number of satisfied clauses (weights depends on the number of variables in clause)
- Initial Solution
 - Can be generated for example by random assignment of variables with 0 or 1: $X=(0,1,1,1,0,0,0,0)$

Neighborhood generation

- Moves
 - A simple move is defined, which flips the value of one variable from 1 to 0 or from 0 to 1
 - More moves can be defined...
- If we apply only the first move the whole neighborhood of solution can be generated by flipping of value of each variable
- In tabu search usually the whole neighborhood is generated during each iteration

Tabu search specific questions

- Memory
 - Which information should we store during the search to possibly avoid the cycles?

Memory

- Recency-based memory
 - Some parameters of few past iterations are stored
 - For example for SAT problem we could store the information for the flipped variables in past 5 iterations
 - Based on that we could forbid (make tabu) the flipping of variables which were flipped in last 5 iterations

Variable x3
should not be
flipped in next
2 iterations

0 0 2 0 0 0 4 0

Variable x7
should not be
flipped in next
4 iterations

Memory

- Frequency-based memory
 - Stores information for larger number of iterations
 - For example for SAT problem we could store the information about number of flips for each variable during the last 100 iterations
 - Based on that we could prefer some of flips of variables more than others during the search

Variable x2
has been
flipped 3 times
in past 100
iterations

12 3 35 20 10 15 12 3

Variable x5
has been
flipped 12
times in past
100 iterations

Selection of solutions

- The acceptance of solution for next iteration depends not only from its quality
- The memory has also the impact in the selection process
- Solution are classified in tabu and not tabu solutions
- Usually the best non tabu solutions is accepted for the next iteration

Selection of solutions

- Aspiration criteria
 - Tabu solution may be accepted if it fulfills some conditions
 - Example: The tabu solution is the best solution so far
- Based on frequency based memory
 - Search can be intensified
 - More frequent moves are preferred
 - Search can be diversified
 - Less used moves during the search are preferred

SAT example

Procedure Tabu-Suche

begin

Initialize tabu list

Generate randomly Initial Solution s_c

Evaluate s_c

repeat

 Generate all neighborhood solutions of the solution s_c

 Find best solution s_x in the neighborhood

 if s_x is not tabu solution then $s_c = s_x$

 else if 'aspiration criteria' is fulfilled then

$s_c = s_x$

 else

 find best not tabu solution in the neighborhood s_{nt}

$s_c = s_{nt}$

 Update tabu list

until (terminate-condition)

end

SAT example

Procedure Tabu-Suche

begin

 Initialize tabu list

Generate randomly Initial Solution s_c

 Evaluate s_c

 repeat

 Generate all neighborhood solutions of the solution s_c

 Find best solution s_x in the neighborhood

 if s_x is not tabu solution then $s_c = s_x$

 else if 'aspiration criteria' is fulfilled then

$s_c = s_x$

 else

 find best not tabu solution in the neighborhood s_{nt}

$s_c = s_{nt}$

 Update tabu list

 until (terminate-condition)

end

SAT example

- Initial Solution
 - Random generated solution

s_c :

| | | | | | | | |
|---|---|---|---|---|---|---|---|
| 1 | 0 | 1 | 0 | 0 | 0 | 1 | 1 |
|---|---|---|---|---|---|---|---|

SAT example

Procedure Tabu-Suche

begin

 Initialize tabu list

 Generate randomly Initial Solution s_c

Evaluate s_c

 repeat

 Generate all neighborhood solutions of the solution s_c

 Find best solution s_x in the neighborhood

 if s_x is not tabu solution then $s_c = s_x$

 else if 'aspiration criteria' is fulfilled then

$s_c = s_x$

 else

 find best not tabu solution in the neighborhood s_{nt}

$s_c = s_{nt}$

 Update tabu list

 until (terminate-condition)

end

SAT example

- Evaluate solution
 - Suppose that the fitness of solution is 30

SAT example

Procedure Tabu-Suche

begin

 Initialize tabu list

 Generate randomly Initial Solution s_c

 Evaluate s_c

 repeat

Generate all neighborhood solutions of the solution s_c

 Find best solution s_x in the neighborhood

 if s_x is not tabu solution then $s_c = s_x$

 else if 'aspiration criteria' is fulfilled then

$s_c = s_x$

 else

 find best not tabu solution in the neighborhood s_{nt}

$s_c = s_{nt}$

 Update tabu list

 until (terminate-condition)

end

Neighborhood of current solution

s_c

| | | | | | | | |
|---|---|---|---|---|---|---|---|

| S_8 | 1 | 0 | 1 | 0 | 0 | 0 | 1 | 0 |

Eight neighborhood solutions, which are obtained by flipping of a single bit in the solution S_c

SAT example

Procedure Tabu-Suche

begin

 Initialize tabu list

 Generate randomly Initial Solution s_c

 Evaluate s_c

 repeat

 Generate all neighborhood solutions of the solution s_c

Find best solution s_x in the neighborhood

if s_x is not tabu solution then $s_c = s_x$

 else if 'aspiration criteria' is fulfilled then

$s_c = s_x$

 else

 find best not tabu solution in the neighborhood s_{nt}

$s_c = s_{nt}$

 Update tabu list

 until (terminate-condition)

end

Evaluation of solutions

| | | Evaluation | | | | | | | | |
|-------|---|------------|---|---|---|---|---|---|---|----|
| s_c | <table border="1"><tr><td>1</td><td>0</td><td>1</td><td>0</td><td>0</td><td>0</td><td>1</td><td>1</td></tr></table> | 1 | 0 | 1 | 0 | 0 | 0 | 1 | 1 | 29 |
| 1 | 0 | 1 | 0 | 0 | 0 | 1 | 1 | | | |
| s_1 | <table border="1"><tr><td>0</td><td>0</td><td>1</td><td>0</td><td>0</td><td>0</td><td>1</td><td>1</td></tr></table> | 0 | 0 | 1 | 0 | 0 | 0 | 1 | 1 | 31 |
| 0 | 0 | 1 | 0 | 0 | 0 | 1 | 1 | | | |
| s_2 | <table border="1"><tr><td>1</td><td>1</td><td>1</td><td>0</td><td>0</td><td>0</td><td>1</td><td>1</td></tr></table> | 1 | 1 | 1 | 0 | 0 | 0 | 1 | 1 | 37 |
| 1 | 1 | 1 | 0 | 0 | 0 | 1 | 1 | | | |

Best solution

SAT example

Procedure Tabu-Suche

begin

 Initialize tabu list

 Generate randomly Initial Solution s_c

 Evaluate s_c

 repeat

 Generate all neighborhood solutions of the solution s_c

 Find best solution s_x in the neighborhood

 if s_x is not tabu solution then $s_c = s_x$

 else if 'aspiration criteria' is fulfilled then

$s_c = s_x$

 else

 find best not tabu solution in the neighborhood s_{nt}

$s_c = s_{nt}$

Update tabu list

 until (terminate-condition)

end

Update memory

- Recency based memory

- M:

| | | | | | | | |
|---|---|---|---|---|---|---|---|
| 0 | 5 | 0 | 0 | 0 | 0 | 0 | 0 |
|---|---|---|---|---|---|---|---|

Update memory

- Recency based memory

- M:

| | | | | | | | |
|---|---|---|---|---|---|---|---|
| 0 | 5 | 0 | 0 | 0 | 0 | 0 | 0 |
|---|---|---|---|---|---|---|---|

Flipping of bit in position 2 is Tabu in next 5 iterations

Update memory

- Recency based memory

- M:

| | | | | | | | |
|---|---|---|---|---|---|---|---|
| 0 | 5 | 0 | 0 | 0 | 0 | 0 | 0 |
|---|---|---|---|---|---|---|---|

- Frequency based memory

- F:

| | | | | | | | |
|---|---|---|---|---|---|---|---|
| 0 | 1 | 0 | 0 | 0 | 0 | 0 | 0 |
|---|---|---|---|---|---|---|---|

Flipping of bit in position 2 is Tabu in next 5 iterations

Update memory

- Recency based memory

- M:

| | | | | | | | |
|---|---|---|---|---|---|---|---|
| 0 | 5 | 0 | 0 | 0 | 0 | 0 | 0 |
|---|---|---|---|---|---|---|---|

Flipping of bit in position 2 is Tabu in next 5 iterations

- Frequency based memory

- F:

| | | | | | | | |
|---|---|---|---|---|---|---|---|
| 0 | 1 | 0 | 0 | 0 | 0 | 0 | 0 |
|---|---|---|---|---|---|---|---|

Bit in position 2 has been flipped one time

Update memory

- Suppose that in next iteration the best solution is obtained by flipping the bit in position 4. The content of memory after the second iteration will be:

M:

| | | | | | | | |
|---|---|---|---|---|---|---|---|
| 0 | 4 | 0 | 5 | 0 | 0 | 0 | 0 |
|---|---|---|---|---|---|---|---|

F:

| | | | | | | | |
|---|---|---|---|---|---|---|---|
| 0 | 1 | 0 | 1 | 0 | 0 | 0 | 0 |
|---|---|---|---|---|---|---|---|

All non zeros entries are decreased by one at every iteration

SAT problem

- Suppose that after 8 iterations the short term memory has following content:

M:

| | | | | | | | |
|---|---|---|---|---|---|---|---|
| 0 | 4 | 5 | 3 | 1 | 0 | 2 | 0 |
|---|---|---|---|---|---|---|---|

- Suppose that the following solutions are obtained from the neighborhood of the current solution:
 - $\text{eval}(s_1)=35$, $\text{eval}(s_2)=38$, $\text{eval}(s_3)=36$, $\text{eval}(s_4)=34$,
 $\text{eval}(s_5)=32$, $\text{eval}(s_6)=30$, $\text{eval}(s_7)=34$, $\text{eval}(s_8)=33$

SAT problem

- Suppose that after 8 iterations the short term memory has following content:

M:

| | | | | | | | |
|---|---|---|---|---|---|---|---|
| 0 | 4 | 5 | 3 | 1 | 0 | 2 | 0 |
|---|---|---|---|---|---|---|---|

- The following solutions are obtained from the neighborhood of the current solution:
 - $\text{eval}(s_1)=35$, $\text{eval}(s_2)=38$, $\text{eval}(s_3)=36$, $\text{eval}(s_4)=34$,
 $\text{eval}(s_5)=32$, $\text{eval}(s_6)=30$, $\text{eval}(s_7)=34$, $\text{eval}(s_8)=33$
- Best solution in neighborhood has the fitness 38, but it is obtained by flipping bit 2

Flip of bit 2 is tabu! Should we accept this solution?

SAT example

Procedure Tabu-Suche

begin

 Initialize tabu list

 Generate randomly Initial Solution s_c

 Evaluate s_c

 repeat

 Generate all neighborhood solutions of the solution s_c

 Find best solution s_x in the neighborhood

 if s_x is not tabu solution then $s_c = s_x$

else if 'aspiration criteria' is fulfilled then

$s_c = s_x$

 else

 find best not tabu solution in the neighborhood s_{nt}

$s_c = s_{nt}$

 Update tabu list

 until (terminate-condition)

end

Aspiration criteria

- The tabu solution may be accepted, if it fulfills some conditions
 - For example if the solution is the best solution found so far
- Suppose that in SAT Example the best solution found so far has fitness 39

SAT example

Procedure Tabu-Suche

begin

Initialize tabu list

Generate randomly Initial Solution s_c

Evaluate s_c

repeat

Generate all neighborhood solutions of the solution s_c

Find best solution s_x in the neighborhood

if s_x is not tabu solution then $s_c = s_x$

else if 'aspiration criteria' is fulfilled then

$s_c = s_x$

else

find best not tabu solution in the neighborhood s_{nt}

$s_c = s_{nt}$

Update tabu list

until (terminate-condition)

end

SAT example

M:

| | | | | | | | |
|---|---|---|---|---|---|---|---|
| 0 | 4 | 5 | 3 | 1 | 0 | 2 | 0 |
|---|---|---|---|---|---|---|---|

- $eval(s_1)=35$, $eval(s_2)=38$, $eval(s_3)=36$,
 $eval(s_4)=34$, $eval(s_5)=32$, $eval(s_6)=30$,
 $eval(s_7)=34$, $eval(s_8)=33$
- If the aspiration criteria is not fulfilled, only non tabu solutions will be taken in consideration
 - Solutions: s_1, s_6, s_8

SAT example

M:

| | | | | | | | |
|---|---|---|---|---|---|---|---|
| 0 | 4 | 5 | 3 | 1 | 0 | 2 | 0 |
|---|---|---|---|---|---|---|---|

- $\text{eval}(s_1)=35$, $\text{eval}(s_2)=38$, $\text{eval}(s_3)=36$,
 $\text{eval}(s_4)=34$, $\text{eval}(s_5)=32$, $\text{eval}(s_6)=30$,
 $\text{eval}(s_7)=34$, $\text{eval}(s_8)=33$
- If the aspiration criteria is not fulfilled, only non tabu solutions will be taken in consideration
 - Solutions: s_1, s_6, s_8

Solution s_1 is accepted for the next iteration

SAT example

Procedure Tabu-Suche

begin

 Initialize tabu list

 Generate randomly Initial Solution s_c

 Evaluate s_c

 repeat

 Generate all neighborhood solutions of the solution s_c

 Find best solution s_x in the neighborhood

 if s_x is not tabu solution then $s_c = s_x$

 else if 'aspiration criteria' is fulfilled then

$s_c = s_x$

 else

 find best not tabu solution in the neighborhood s_{nt}

$s_c = s_{nt}$

 Update tabu list

until (terminate-condition)

end

Termination condition

- Optimal solution found
- Number of iterations
- Time
- Empty Neighborhood
- No improves of solution for a determined time/number of iterations
- User interaction
- ...

Use of frequency-based memory

- Suppose that the content of frequency-based memory for SAT problem after 100 iterations has the following content

F:

| | | | | | | | |
|----|----|----|----|----|----|----|---|
| 12 | 11 | 15 | 10 | 11 | 11 | 27 | 3 |
|----|----|----|----|----|----|----|---|

- The following solutions are obtained from the neighborhood of the current solution:
 - $\text{eval}(s_1)=46$, $\text{eval}(s_2)=43$, $\text{eval}(s_3)=46$, $\text{eval}(s_4)=45$,
 $\text{eval}(s_5)=44$, $\text{eval}(s_6)=43$, $\text{eval}(s_7)=46$, $\text{eval}(s_8)=46$

Use of frequency-based memory

- Suppose that the content of frequency-based memory for SAT problem after 100 iterations has the following content

F:

| | | | | | | | |
|----|----|----|----|----|----|----|---|
| 12 | 11 | 15 | 10 | 11 | 11 | 27 | 3 |
|----|----|----|----|----|----|----|---|

- The following solutions are obtained from the neighborhood of the current solution:
 - $\text{eval}(s_1)=46$, $\text{eval}(s_2)=43$, $\text{eval}(s_3)=46$, $\text{eval}(s_4)=45$,
 $\text{eval}(s_5)=44$, $\text{eval}(s_6)=43$, $\text{eval}(s_7)=46$, $\text{eval}(s_8)=46$
- Suppose that only solutions s_3 , s_7 , s_8 are non-tabu solutions

Use of frequency-based memory

F:

| | | | | | | | |
|----|----|----|----|----|----|----|---|
| 12 | 11 | 15 | 10 | 11 | 11 | 27 | 3 |
|----|----|----|----|----|----|----|---|

$\text{eval}(s_1)=46$, $\text{eval}(s_2)=43$, $\text{eval}(s_3)=46$,
 $\text{eval}(s_4)=45$, $\text{eval}(s_5)=44$, $\text{eval}(s_6)=43$,
 $\text{eval}(s_7)=46$, $\text{eval}(s_8)=46$

- Solutions s_3 , s_7 , s_8 are non-tabu solutions
- Possible use of memory
 - Make less frequently used moves more attractive
 - Diversification of search

Use of frequency-based memory

F:

| | | | | | | | |
|----|----|----|----|----|----|----|---|
| 12 | 11 | 15 | 10 | 11 | 11 | 27 | 3 |
|----|----|----|----|----|----|----|---|

$\text{eval}(s_1)=46$, $\text{eval}(s_2)=43$, $\text{eval}(s_3)=46$,
 $\text{eval}(s_4)=45$, $\text{eval}(s_5)=44$, $\text{eval}(s_6)=43$,
 $\text{eval}(s_7)=46$, $\text{eval}(s_8)=46$

- Solutions s_3 , s_7 , s_8 are non-tabu solutions
- Possible use of memory
 - Make less frequently used moves more attractive
 - Diversification of search

Solution s_8 will be accepted for next iteration

Use of frequency-based memory

- Other possibilities of use of frequency-based memory
 - Aspiration by default
 - Select a move that is the “oldest” of all considered
 - Aspiration by search direction
 - Memorize also whether or not the moves generated improvements
 - Aspiration by influence
 - Particular move can have larger influence if a “larger” step is made from the old solution to the new

Tabu list

- Length of tabu list (for how many iteration should the solution be made tabu)
 - Usually depends from size of problem
 - The length of tabu list could also change during the search
 - Reactive tabu search

Tabu List

- Hashing
- FIFO list
- Storage of last usage time of moves

Adaptive length of tabu list

- Length is 1 in the beginning
- Length increases when the repetitions of solutions happens
- Length decreases when the repetition of solutions disappears
